

Final integrated umbrella evidence–tier summary

Main 11H output: evidence–anchored framework support, not exact–label–only aggregation.

high priority DA graft transcriptomic identity umbrella

L5 | 419.9

Tier1 evidence anchored framework support

risk safety context umbrella

L1 | 22.9

Tier3 single layer or context support with risk context

PD genetic context umbrella

L1 | 0.8

Tier3 single layer or context support

L = number of supporting upstream evidence layers; score = weighted evidence sum

High–priority umbrella integrates ML, pseudotime, preclinical, state–proxy and projection–proxy layers.
