

Final no-overclaim boundary map

Marker-rule-derived prioritization model is allowed; clinical/outcome claims remain out of scope.

Study identity	evidence-anchored, source-anchored computational transcriptomic prioritization not: clinical-use predictor or therapeutic-efficacy system
Cell-state interpretation	candidate transcriptomic cell states not: validated graft outcome claim
Marker interpretation	candidate transcriptomic marker signatures not: validated diagnostic/prognostic/therapeutic biomarker
Machine-learning interpretation	marker-rule-derived prioritization model not: patient outcome or therapeutic-response predictor
Label-source interpretation	marker/signature-rule-derived prioritization labels not: real graft outcome graft-relevant labels
Pseudotime interpretation	graph-based transcriptomic pseudotime/order not: lineage fate tracing or functional mechanism proof
Projection-associated interpretation	projection-associated molecular competence proxy not: anatomical-projection claim
Lineage/state interpretation	state-level transcriptomic proxy support not: barcodes-lineage claim
Safety/risk interpretation	survival/benefit-risk-related transcriptomic support not: clinical-safety or tumorigenicity predictor
PD genetic-context interpretation	linked PD genetic-context support not: genetic causality or disease mechanism proof
Repository/data interpretation	scripts and derived manifests for reproducibility not: redistribution of raw public data
