

11D survival/stress perturbation evidence status

Bulk/scRNA module evidence retained; CRISPR interpreted as manual–column proxy overlap support only.

Component	Evidence	Role	Allowed wording
GSE216363 bulk	48 bulk module–score rows	survival/stress perturbation module support	bulk survival/stress module support
GSE216364 scRNA	40 single–cell module–score rows	single–cell survival/stress module support	single–cell survival/stress module support
GSE217131 CRISPR	9 biological manual–column proxy genes; 8 overlap events across 2 module(s)	manual–column CRISPR proxy overlap support only	CRISPR proxy overlap support; not validated survival–hit genes
GSE217131 SafeHarbor/control loci	3 control loci excluded from candidate count	control/background audit only	SafeHarbor/control loci excluded from biological candidate count

Do not claim clinical outcome prediction, graft efficacy prediction, or validated CRISPR survival–hit genes.
